ProMed Scanning Solutions
Innovative Scanning Solutions
for Physician Practices, Clinics, and Hospitals

Document scanning can be a labor intensive and time-consuming process, especially in healthcare.

ProMed Scanning Solutions cut data capture operating costs by integrating with your existing PMS/HIS system, and with the leading document management systems (including our own **ProMed DM** solution), providing a single scanning platform to meet the needs of the entire organization. Capture laminated insurance cards and driver license, multi-colored forms, EOBs, EKGs, and handwritten scripts. **ProMed also provides integrated data capture for fax, email, and electronic files.**

☑ *Patient Registration Scanning*

☑ *Medical Records Scanning*

☑ *High-Volume Batch Scanning*

Patient Registration Scanning

One-touch scanning. Advanced image processing and enhanced barcode recognition reduce the time needed for document prep and manual indexing. The solution uses **ProMed Enabler** to automatically pull index info from your registration screen; with **no additional data entry**. Just place the document on the scanner and click the on-screen button to select either driver license, insurance card, or referral document. Previously stored images for the patient can be immediately accessed, eliminating the need to re-scan. Account or encounter number is updated automatically for the existing image(s).

Key Benefits of ProMed Patient Registration Scanning:

- Requires zero data entry by registration staff
- Standardizes registration process; guarantees verification of ID & insurance
- Display a complete list (by MR#/acct#) of identification documents and other scanned information stored in your PMS/HIS & other backend systems

The cost of filling and maintaining a single cabinet is staggering: as much as $2,000 per year for a standard 24" wide, 4-drawer cabinet!

Medical Records Scanning

ProMed Medical Records Scanning provides highly advanced scanning capabilities to capture patient documents of varying type, age, color, size and content. Labor costs are minimized by built-in sophisticated image processing techniques and enhanced barcode recognition. Time and error-saving capabilities like automatic forms classification and data extraction for Encounter Form processing can be added to allow charge data to be sent directly to your billing system. ProMed's simple user interface provides chart page sorting to quickly locate documents. Forms classification and page sorting means ProMed can even automatically identify chart deficiencies.

Key Benefits of ProMed Medical Records Scanning:

- Designed specifically for charts; no need to sort chart by document type, single vs. dual-sided, landscape vs. portrait
- Simplifies the sorting of document types within a chart
- Automates the extraction of data directly from scanned documents for indexing
- Ability to customize internal workflow for scanning, indexing and quality assurance
- Ability to store document images on microfilm for archive and legal retention

High-Volume Batch Scanning

Given their typically lean IS staffs, most hospitals desire one scanning solution that can be used across accounting, purchasing, HR, and clinical departments. **ProMed High-Volume Batch Scanning** combines a configurable user interface with the most advanced image processing available from industry leaders Kofax and Kodak, creating a scanning system that is user friendly, requiring minimal data entry with flawless image quality. Kofax's **VRS** and Kodak's **Perfect Page** enable **ProMed Scanning** users to scan more documents with less document prep, while achieving the highest image quality, and enabling data extraction, data validation, forms classification and invoice processing.

ProMed High-Volume Batch Scanning provides you with advanced features like:

- **Enhanced Barcode Recognition**
- **Blank Page Detection**
- **Auto Page Orientation**
- **Advanced Image Clarity**

Key Benefits of ProMed High-Volume Batch Scanning:

- Scan greater volumes with fewer staff
- Achieve high image quality with reliable barcode recognition
- Provide flexible user interface designed to eliminate keystrokes
