

**OPEX Import Utility for Kofax**  
From your "Digital Mailroom" to your Business Process

***This unique integration capability taps into the high performance versatility of the OPEX DS2200, AS3690, and AS7200 series Scanners, to extend the processing power of Kofax Capture Solutions.***

Excessive paper handling causes higher labor costs, billing process backlogs, and costly delays in making critical business decisions. The speed at which information must flow cannot wait for paper files to circulate.

The key is to capture the data and route it to the group or individual who will make it useful. By transforming the data into useful information more quickly, you can maintain your competitive edge.

**We can help.** By partnering with the leading product manufacturers in the business, we've created an exceptional integration utility to link your digital mailroom directly to your business process.

## **OPEX Import Utility for Kofax**

Maximize your investment in **OPEX** scanning equipment. Scan *everything* with OPEX, right out of the envelope, and allow **Kofax Capture** to identify, index and distribute it to a variety of document management and database systems. OPEX scan stations enable businesses to quickly go from mixed documents to usable data, or even from sealed envelopes to usable data in just seconds. Capture accounts receivable, accounts payable, and human resources mail right in your mailroom. Then let the **OPEX Import Utility for Kofax (OIU)** electronically deliver it to your knowledge workers.

### **Case in Point**

One client, a large utility company, utilizes the **OIU** with OPEX 3690i scanners to scan 1.2M pages of vendor invoices each year and then extracts the data from those images using the **Kofax Transformation Modules** software. All paper invoices—regardless of the type and number of pages—are scanned. The system intelligently handles different types of invoices in multiple formats from thousands of vendors. The invoices come in numerous shapes and sizes, different paper colors, and both single- and double-sided documents.

Once the paper is scanned in the mailroom, the images and data files are transferred to a server for processing by the Kofax Transformation Modules. The XML output files created by the OPEX scanner are monitored and processed by the OIU. The OPEX XML data files (OXI) are parsed, interpreted and imported into Kofax Capture as individual and unique batches.

A batch class is created based on the job type selected by the OPEX operator, and all relevant data is contained within the OXI file. Data from the OXI file is seamlessly mapped to and transferred into Kofax Capture. Optical Character Recognition (OCR) is performed on the invoices to extract data, which is then fed into their business application.

# OPEX Import Utility for Kofax

The OPEX Import Utility for Kofax is a robust application which enables the mapping of OPEX-generated OXI data and metadata to Kofax Capture Batch Classes. This powerful and easy to use utility is fully compliant with Kofax Capture 7.x or later.

## **FEATURES:**

- Runs as an Application or Unattended Service
- Point & click configuration and operation
- Configuration details saved as XML
- Ability to save, load, or clear multiple batch mappings and document mappings for many-to-many relationship between OPEX Job Names and Kofax Capture Batch Classes
- Metadata mapping at both the Batch Class and Document Class levels in Kofax Capture providing a high degree of flexibility
- History and Logging text available for operational review and troubleshooting
- Unique and meaningful batch naming
- Supports UNC, Mapped, and Local drive paths to the OPEX Batch directory
- Ability to run multiple OIU applications or services to increase throughput
- OXI filenames are modified during processing to indicate job status

## **SYSTEM REQUIREMENTS:**

- Compliant with the OPEX OXI Interface Spec V 1.25
- Compatible with OPEX 2200, 3690, and 7200 series
- Kofax Capture Version 7.0 or later
- .NET Framework 3.5 or later
- Windows 2000 or later

### **About INDICIUM Software, Inc.**

INDICIUM Software, Inc. is a leading provider of document capture, management, and workflow software products to manage documents electronically and automate business processes.

The INDICIUM product suite is distributed through a network of solution providers to clients in numerous industries. For more information, visit [www.indiciumsoftware.com](http://www.indiciumsoftware.com), or contact your INDICIUM reseller.
